Cardiovascular disease is the number-one killer of both men and women, and is responsible for more deaths than the next nine causes combined.

- One stroke-related death occurs every three minutes.
- Half a million women a year are taken by heart disease, more than any other medical cause, including breast cancer.
- African Americans are twice as likely to suffer a heart attack or stroke.
- The biggest risk factors for coronary artery disease (CAD) include obesity, high blood pressure or cholesterol, diabetes, tobacco use, and a family history of heart disease.
- Fourteen million Americans are currently living with CAD, and one in four are now at risk for developing the disease.
- Approximately 58 million Americans have hypertension, a leading cause of death and disability in the United States.

24 Good Reasons you should take LIFE'S CARDIO

Nitric Oxide Formula with L-Arginine, L-Citrulline, COQ-10, EDTA, Vitamins, Minerals, Herbs and more.

The remarkable properties of L-Arginine were validated by the 1998 Nobel Prize in Medicine, and since then have created a frenzy of interest in the pharmaceutical and nutraceutical industry. The nitric oxide derived from L-Arginine is directly or indirectly implicated in many Cellular Responses and health conditions, from the cardiovascular system to the immune system, and hormone function to nerve function. Although an exhaustive list of possible applications for the amino acid is not included, the following are the primary scientifically backed reasons why anyone, including healthy people should consider adding L-Arginine to their health and wellness regime.

1. L-Arginine is one thousand times more powerful than any naturally occurring antioxidant in the body. L-Arginine’s antioxidant properties support various body system and may protect against heart disease, stroke, cancer, and diabetes, as well as slowing premature aging.

2. Offers wide-ranging cardiovascular support, including controlling blood pressure and plaque formation. Nitric oxide keeps arteries relaxed and pliable for normal blood pressure, preventing hypertension and angina.

3. Enhances memory, particularly long-term memory, and may help to reverse the effects of dementia and Alzheimer’s disease.

4. Boosts human growth hormone (HGH) production, which has anti-aging properties.

5. Enhances communication of messenger cells between nerves and the brain.

7. May help in the treatment and prevention of diabetes since many disease complications, including poor circulation and blindness, are vascular in nature. L-Arginine is also found to regulate insulin secretion in the pancreas.

8. It may inhibit the division and proliferation of cancer cells.

9. Helps with cholesterol control by lowering serum and LDL cholesterol levels.

10. Enhances male sexual performance by treating vascular erectile dysfunction (ED).

11. L-Arginine’s anticoagulant abilities reduce clotting and lower heart attack- and stroke risk.

12. Reduces pregnancy-related hypertension, a risk factor for both the expecting mother and the unborn child.

14. Relaxes hypertonic sphincter muscles, preventing and healing hemorrhoids.

15. Boosts lean muscle mass and preserves bone density by encouraging HGH production, which also leads to a reduction in fatty tissue. Because of these properties, it may be useful in weight management and strength training.

16. Can help offset cardiovascular and lung damage caused by tobacco use, since nitric oxide levels in smokers are less than half of those found in non-smokers.

17. L-Arginine helps to accelerate wound healing and post surgery recovery. Research has shown it is useful in treating burn wounds and stimulates wound healing in the elderly.

18. May be useful in enhancing athletic performance due to its ability to boost exercise tolerance, its beneficial effect on the lungs, and its effect on HGH levels. This helps with building lean muscle tissue.

19. It may be used to improve the function of the prostate.

20. May prevent and possible reverse the effects of osteoporosis by positively affecting bone mass.

21. It has been used in the treatment of irritable bowel syndrome and to reduce the occurrence of ulcers, especially stress related, without affecting gastric acid production.

22. May improve renal function and slow the progression of renal disease and age-related chronic renal failure. L-Arginine’s protective effect on the kidneys may also benefit those with diabetes.

23. The coenzyme Q-10 found in this formula has been used for treating heart and blood vessel conditions such as congestive heart failure (CHF), chest pain (angina), and high blood pressure. It is also used for diabetes, gum disease (both taken by mouth and applied directly to the gums), breast cancer, Huntington’s disease, Parkinson’s disease, muscular dystrophy, chronic fatigue syndrome (CFS), Lyme disease, and increasing exercise tolerance. Some people use coenzyme Q-10 to treat hair loss.

24. The Amino Acid L-Citrulline has been known to help restore Erectile Function.
